

CERTIFICATE OF CONSTANCY OF PERFORMANCE

Issued by DBI Certification, notified body No. 2531.

In compliance with *Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011* (the Construction Products Regulation or CPR), this certificate applies to the construction product

55000-190 AlarmSense Class A1R Heat Detector 55000-193 AlarmSense Class CS Heat Detector

The product fulfils the essential characteristic:

	See Annex 1
Intended use:	Applications related to automatic fire alarm systems
Placed on the market under the name of	or trade mark of:
	Apollo Fire Detectors Ltd.
	36 Brookside Road
	Havant, Hampshire, P09 1JR
	United Kingdom
and produced in the manufacturing plan	nt:
	Apollo Fire Detectors Ltd.
	36 Brookside Road
	Havant, Hampshire, P09 1JR
	United Kingdom
This attests that all provisions concernin	ng the performance described in Annex ZA of the standard(s)
EN 54-5:2017/A1:2018 :	Fire detection and fire alarm systems - Part 5: Heat detectors - point heat detectors

under system 1 for the performance set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the

CONSTANCY OF PERFORMANCE OF THE CONSTRUCTION PRODUCT.

This certificate was first issued on 2020-10-15 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

The attached annexes form part of this certificate.

Date of issue: 2022-08-24.

(This certificate supersedes the previous version of this certificate issued 2020-10-15)

Merete Poulsen Responsible for evaluation

Steen Nilsson Responsible for certification decision

Annex 1

EXTENT

Model Reference:

55000-190 AlarmSense Class A1R Heat Detector 55000-193 AlarmSense Class CS Heat Detector

Variant:

55000-193CSS AlarmSense Class CS Heat Detector

Description:

Class A1R/CS Heat Detector intended for use in fire detection and fire alarm systems installed in and around buildings.

Operating Voltage:

9 to 33 V DC

Heat Class: A1R/CS

Base:

45681-244 AlarmSense Detector Standard Mounting Base

Heat Response Catergory:

*For detector categories with the suffix S or R, additional requirements are needed see 4.4.1 or 4.4.2

Table 1

Detector Category (Heat Class):	Typical Application Temperature	Maximum Application	Minimum Static Response	Maximum Static Response
		Temperature °C	Temperature °C	Temperature °C
55000-190 AlarmSense A1	25	50	54	65
55000-193 AlarmSense C	55	80	84	100

Performance

Essential characteristics	Clauses in EN 54-5:2017/ A1:2018	Regulatory classes	Performance
Operational reliability:			
Position of heat sensitive element	4.2.1		The heat sensitive element(s) or at least part of it, except elements with auxiliary functions (e.g.characteristic correctors), are a distance ≥15mm from the mounting surface of the point heat detector.
Individual alarm indication	4.2.2		Category A1R, CS The heat detector is provided with an integral red visual indicator and can remain identified until the alarm is reset. The visual indicator is visible from a distance of 6 m directly below the point heat detector, in an ambient light intensity up to 500 lx.
Connection of ancillary	4.2.3	-	Open or short circuit failures of connection to ancillary
devices			device do not prevent the correct operation of the
		55000-190	detector
		AlarmSense	
Monitoring of detachable	4.2.4	A1R	A fault condition is signaled when the detector is removed
point heat detectors			from the mounting base.
		55000-193	
Manufacturer's	4.2.5	AlarmSense	It is not possible to change the maufacture's settings
adjustments		CS	expept by special means (e.g. a special code or tool, or by breaking or remove a seal).
Onsite adjustments of	4.2.6	-	N/A
response behavior	4.2.0		
Software controlled	4.2.7		N/A
detectors (when provided)			
Nominal activation]	
conditions/Sensitivity:			
Directional dependence	4.3.1		The response time of the point dectetor do not unduly depend on the direction of airflow around the point heat detector.
Static response	4.3.2	1	The response temperatures of the point heat detectors lie
temperature			between the minimum and maximum static response
			temperatures, according to the category of the point heat detector in Table 1 above.

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

Response times from typical application temperature	4.3.3		The response tim between the low the appropriate above.	ver and upper	response ti	me limits for
Response times from 25 °C	4.3.4	-	The response tim response time at			
Response times from high ambient temperature	4.3.5		No alarm or fault temperatures ap temepratures.		-

Tolerance to supply voltage:		
Variation in supply parameters	4.5	The point heat detector does not unduly depent on variation in the supply parameters and lie between the lower and upper response time limits specified in Table 2 above.
Durability of nominal		
activation conditions/Sensitivity:		
temperature resistance		
Cold (operational)	4.6.1.1	No alarm or fault signal was given during the transition to the conditioning temperature or during the period at the condition temperature
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		55000-190 AlarmSense A1R 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 55000-193 AlarmSense CS 20 K min ⁻¹ was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Dry heat (endurance)	4.6.1.2	No fault signal was given on reconnection attributable to the endurance conditioningPoint heat detector categoryConditioning Temperature °C
		CS80 ±2Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		 55000-190 AlarmSense A1R 20 K min⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 55000-193 AlarmSense CS 20 K min⁻¹ was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Humidity resistance		
Damp heat, cyclic (operational)	4.6.2.1	No alarm or fault signal was given during the conditioning.
		Lower temperature: (25±3) °C Upper temperature: (40±2) °C
		Relative humidity: At lower temperature :≥ 95 % At upper temperature : (93 ±3) %

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

		s compared with the time obtained in 4.3.6
David hash shards shake	4622	
Damp heat, steady-state	4.6.2.2	No fault signal was given on reconnection attributable to
(endurance)		the endurance conditioning.
		Conditioning
		Temperature : 40 ±2 °C
		Relative Humidity: 93 ±3 %
		Duration : 21 days
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s
		and did not exceed 2 min 40 s compared with the time
		obtained in 4.3.6.
		55000-190 AlarmSense A1R
		20 K min ⁻¹ was not less than 30 s and did not exceed 30 s
		compared with the time obtained in 4.3.6
		55000-193 AlarmSense CS
		20 K min ⁻¹ was not less than 1 min and did not exceed 30
		s compared with the time obtained in 4.3.6
Corrosion resistance		
Sulphur dioxide (SO ₂)	4.6.3	No fault signal was given on reconnection attributable to
corrosion (endurance)		the endurance conditioning.
		Conditioning
		Temperature : 25 ±2 °C
		Relative Humidity: 93 ±3 %
		SO2 concentration: 25 ±5 ppm (by volume)
		Duration : 21 days
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s
		and did not exceed 2 min 40 s compared with the time
		obtained in 4.3.6.
		55000-190 AlarmSense A1R
		20 K min ⁻¹ was not less than 30 s and did not exceed 30 s
		compared with the time obtained in 4.3.6
		55000-193 AlarmSense CS
		20 K min ⁻¹ was not less than 1 min and did not exceed 30
		s compared with the time obtained in 4.3.6
Vibration resistance		
Shock (operational)	4.6.4.1	No alarm or fault signal was given during the
		conditioning period or an additional 2 min.
		For specimen with a mass ≤ 4,75 kg :
		Shock pulse type: Half sine

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

		Pulse duration: 6 ms Peak acceleration: 10X (100-20M) ms-2 (M is specimen mass in Kg) Number of directions: 6 Pulses per direction: 3 Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		 55000-190 AlarmSense A1R 20 K min⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 55000-193 AlarmSense CS 20 K min⁻¹ was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Impact (operational)	4.6.4.2	No alarm or fault signal was given during the conditioning period or an additional 2 min. Conditioning: Impact energy: 1,9 ±0,1 J Hammer velocity: 1,5 ±0,13 ms ⁻¹
		Number of impacts: 1 Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6. 55000-190 AlarmSense A1R
		20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 55000-193 AlarmSense CS 20 K min ⁻¹ was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Vibration, sinusoidal (operational)	4.6.4.3	No fault signal was given during the conditioning Conditioning: Frequency range: 10 to 150 Hz Acceleration amplitude: 5 ms ⁻² (≈0,5 g _n) Number of axes : 3 Sweep rate: 1 octave min ⁻¹
		Number of sweep cycles: 1 per axis Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		 55000-190 AlarmSense A1R 20 K min⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 55000-193 AlarmSense CS 20 K min⁻¹ was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Vibration, sinusoidal (endurance)	4.6.4.4	No fault signal was given on reconnection attributable to the endurance conditioning.

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

	Conditioning:
	Frequency range: 10 to 150 Hz
	Acceleration amplitude: 10 ms ⁻² (\approx 1,0 g _n)
	Number of axes : 3
	Sweep rate: 1 octave min ⁻¹
	Number of sweep cycles: 20 per axis
	Response time at 3 K min ⁻¹ was not less than 7 min 13 s
	and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
	55000-190 AlarmSense A1R
	20 K min ⁻¹ was not less than 30 s and did not exceed 30 s
	compared with the time obtained in 4.3.6
	55000-193 AlarmSense CS
	20 K min ⁻¹ was not less than 1 min and did not exceed 30
	s compared with the time obtained in 4.3.6
Electrical stability EMC 4.6.5	Compliance in EN 50130-4:2011 and No fault signal was
immunity (operational)	given during the conditioning.
	Response time at 3 K min ⁻¹ was not less than 7 min 13 s
	and did not exceed 2 min 40 s compared with the time
	obtained in 4.3.6.
	obtailed in 4.5.6.
	55000-190 AlarmSense A1R
	20 K min ⁻¹ was not less than 30 s and did not exceed 30 s
	compared with the time obtained in 4.3.6
	55000-193 AlarmSense CS
	20 K min ⁻¹ was not less than 1 min and did not exceed 30
	s compared with the time obtained in 4.3.6
