

CERTIFICATE OF CONSTANCY OF PERFORMANCE

Issued by DBI Certification, notified body No. 2531.

In compliance with *Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011* (the Construction Products Regulation or CPR), this certificate applies to the construction product

Orbis Class A1S conventional Heat Detectors

The product fulfils the essential characteristic:

See Annex 1

Intended use:

Applications related to automatic fire alarm systems

Placed on the market under the name or trade mark of:

Apollo Fire Detectors Ltd. 36 Brookside Road Havant, Hampshire, GB-P09 1JR United Kingdom

and produced in the manufacturing plant:

Apollo Fire Detectors Ltd. 36 Brookside Road Havant, Hampshire, GB-P09 1JR United Kingdom

This attests that all provisions concerning the performance described in Annex ZA of the standard(s)

EN 54-5:2017/A1:2018

: Fire detection and fire alarm systems - Part 5: Heat detectors - point heat detectors

under system 1 for the performance set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the

CONSTANCY OF PERFORMANCE OF THE CONSTRUCTION PRODUCT.

This certificate was first issued on 2019-10-09 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

The attached annexes form part of this certificate.

Date of issue: 2022-06-30

(This certificate supersedes the previous version of this certificate issued 2019-10-09)

Merete Poulsen Responsible for evaluation

Steen Nilsson Responsible for certification decision

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

Annex 1

EXTENT

Model Reference:

Orbis Class A1S conventional Heat Detectors

Variants:

ORB-HT-11166-APO Orbis Class A1S Heat Detector with SensAlert and FasTest ORB-HT-11167-APO Orbis Class A1S Heat Detector with Flashing LED, SensAlert and FasTest

Bases:

OB: ORB-MB-00001-APO TimeSaver base OL: ORB-MB-00002-APO TimeSaver base LX (without continuity checking link) OD: ORB-DB-00003-APO TimeSaver diode base OR: ORB-RB-10004-APO TimeSaver relay base XL: ORB-MB-00012-APO & OEX-MB-00016-APO LX bases EB: ORB-MB-00019-APO TimeSaver deep base

Ancillary:

ORB-BA-10008-APO Adapter Base (to be used in conjunction with the following bases only: 45681-200 & 45681-201)

Description:

Class A1S Adressable Heat Detector intend for use in fire detection and fire alarm systems intalled in and around buldings. With additional test for Suffix S detectors.

Operating Voltage:

8.5 to 33 V DC

Heat Response Catergory:

*For detector categories with the suffix S or R, additional requirements are needed see 4.4.1 or 4.4.2

Essential characteristics	Clauses in EN 54-5:2017/ A1:2018	Regulatory classes	Performance
Operational reliability:			
Position of heat sensitive element	4.2.1		The heat sensitive element(s) or at least part of it, except elements with auxiliary functions (e.g.characteristic correctors), are a distance ≥15mm from the mounting surface of the point heat detector.
Individual alarm indication	4.2.2	-	Category A1S The heat detector is provided with an integral red visual indicator and can remain identified until the alarm is reset. The visual indicator is visible from a distance of 6 m directly below the point heat detector, in an ambient light intensity up to 500 lx.
Connection of ancillary devices	4.2.3		Open or short circuit failures of connection to ancillary device do not prevent the correct operation of the detector
Monitoring of detachable point heat detectors	4.2.4		A fault condition is signaled when the detector is removed from the mounting base.
Manufacturer's adjustments	4.2.5		It is not possible to change the maufacture's settings expept by special means (e.g. a special code or tool, or by breaking or remove a seal).
Onsite adjustments of response behavior	4.2.6		N/A
Software controlled detectors (when provided)	4.2.7	– A1S	The software documentation and the software design complies supplied by the manufacturer with the requirements of this standard.
Nominal activation conditions/Sensitivity:			
Directional dependence	4.3.1		The response time of the point dectetor do not unduly depend on the direction of airflow around the point heat detector.
Static response temperature	4.3.2		The response temperatures of the point heat detectors lie between the minimum and maximum static response temperatures, according to the category of the point heat detector in Table 1 above.
Response times from typical application temperature	4.3.3		The response times of the point heat detector lie between the lower and upper response time limits for the appropriate point heat detector category in Table 2 above.
Response times from 25 °C	4.3.4		The response time at 3 K min ⁻¹ exceeds 7 min 13 s and the response time at 20 K min ⁻¹ exceeds 1 min 0 s.
Response times from high ambient temperature	4.3.5		No alarm or fault signal was given at high ambient temperatures appropriate to the anticipated service temepratures.

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

		A1S 3 K min ⁻¹ , Lower limit, 1 min 20s and upper limit 13 m 40s.
		20 K min ⁻¹ , Lower limit, 12 s and upper limit 2 m 20 s.
Reproducibility	4.3.6	The response times of the point heat detectors lie between the lower ad upper response time limits specified in Table 2 above.
Response delay (response		
time):		
Additional test for suffix S 4.4.1 point heat detectors		Suffix S point heat detector did not exceed the lower limits of response time during the transer period or during the 10 min exposure below.
		Point heat detector categoryConditioning Temperature °CAirflow Temperature °C
		A1S 5 ±2 50 ±2
		Rate of rise of air temperature K min-1Lower Limit response time
		Min S
		3 9 40
		5 5 48 10 2 54
		20 1 27
		30 58
Additional test for suffix R point heat detectors	4.4.2	N/A
Tolerance to supply voltage:		
Variation in supply	4.5	The point heat detector does not unduly depent on
parameters		variation in the supply parameters and lie between the lower and upper response time limits specified in Table 2 above.
Durability of nominal		
activation conditions/Sensitivity:		
Temperature resistance		
Cold (operational)	4.6.1.1	No alarm or fault signal was given during the transition to the conditioning temperature or during the period at the condition temperature
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
Dry heat (endurance)	4.6.1.2	No fault signal was given on reconnection attributable to the endurance conditioning

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		obtained in 4.5.0.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed
		30 s compared with the time obtained in 4.3.6
Humidity resistance		
Damp heat, cyclic	4.6.2.1	No alarm or fault signal was given during the
(operational)		conditioning.
		Lower temperature: (25±3) °C
		Upper temperature: (40±2) °C
		Relative humidity:
		At lower temperature :≥ 95 %
		At upper temperature : (93 ±3) %
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s
		and did not exceed 2 min 40 s compared with the time
		obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed
		30 s compared with the time obtained in 4.3.6
Damp heat, steady-state	4.6.2.2	No fault signal was given on reconnection attributable to
(endurance)		the endurance conditioning.
		Conditioning
		Temperature : 40 ±2 °C
		Relative Humidity: 93 ±3 %
		Duration : 21 days
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s
		and did not exceed 2 min 40 s compared with the time
		obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed
		30 s compared with the time obtained in 4.3.6
Corrosion resistance		
Sulphur dioxide (SO ₂)	4.6.3	No fault signal was given on reconnection attributable to
corrosion (endurance)		the endurance conditioning.
		Conditioning
		Temperature : $25 \pm 2 \degree$ C
		Relative Humidity: 93 ±3 %
		SO2 concentration: 25 ±5 ppm (by volume)
		Duration : 21 days
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s
		and did not exceed 2 min 40 s compared with the time
		obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed
		30 s compared with the time obtained in 4.3.6

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

Vibration resistance		
Shock (operational)	4.6.4.1	No alarm or fault signal was given during the conditioning period or an additional 2 min.
		For specimen with a mass ≤ 4,75 kg :
		Shock pulse type: Half sine Pulse duration: 6 ms Peak acceleration: 10X (100-20M) ms-2 (M is specimen mass in Kg) Number of directions: 6 Pulses per direction: 3
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
Impact (operational)	4.6.4.2	No alarm or fault signal was given during the conditioning period or an additional 2 min. Conditioning:
		Impact energy: $1,9 \pm 0,1 \text{ J}$ Hammer velocity: $1,5 \pm 0,13 \text{ ms}^{-1}$ Number of impacts: 1
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
Vibration, sinusoidal (operational)	4.6.4.3	No fault signal was given during the conditioning Conditioning: Frequency range: 10 to 150 Hz
		Acceleration amplitude: 5 ms ⁻² (~0,5 g _n) Number of axes : 3 Sweep rate: 1 octave min ⁻¹ Number of sweep cycles: 1 per axis
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
Vibration, sinusoidal (endurance)	4.6.4.4	No fault signal was given on reconnection attributable to the endurance conditioning.
		Conditioning: Frequency range: 10 to 150 Hz Acceleration amplitude: 10 ms²(≈1,0 g _n) Number of axes : 3

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

		Sweep rate: 1 octave min ⁻¹ Number of sweep cycles: 20 per axis
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
Electrical stability EMC immunity (operational)	4.6.5	Compliance in EN 50130-4:2011 and No fault signal was given during the conditioning.
		Response time at 3 K min ⁻¹ was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
		A1S: 20 K min ⁻¹ was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6
